

Numbers for 100's

I found a fantastic candy store this summer!

I talked to the owner of the store and he is thinking about opening a store in our hometown!

He sells handmade chocolates called truffles. His boxes have the name of his store and with this specific logo on them. He sells boxes of 10 chocolates.

He wants to order just enough boxes to sell the truffles in this first order.

Here is what he has ordered:

- 263 chocolate truffles
- 173 vanilla truffles
- 97 chocolate covered nuts
- 87 chocolate-covered jelly candies
- 188 chocolate-covered caramels
- 63 chocolate-covered nougats

How many boxes of ten chocolates will there be? How many packages of ten boxes will there be?
